

Streamlining Embedded SoC Design with Low-Cost, Fast Track Path to ARM IP

October 2015

Embargoed until 7am GMT, Tuesday 13 October, 2015

I

CONFIDENTIAL

The Architecture for the Digital World®

ARM

ARM is Accelerating Innovation

Easy access to a pre-integrated ARM® Cortex®-M0 processor system for design, simulation and prototyping

Low-cost, simplified fast-track \$40k license to design, manufacture, and commercialise Cortex-M0 based products

Bringing together a global network of design houses to help with custom SoC development

New Wave of Innovation

Driving a new wave of custom SoC development

Sensor and mixed signal companies: integrated IoT solutions

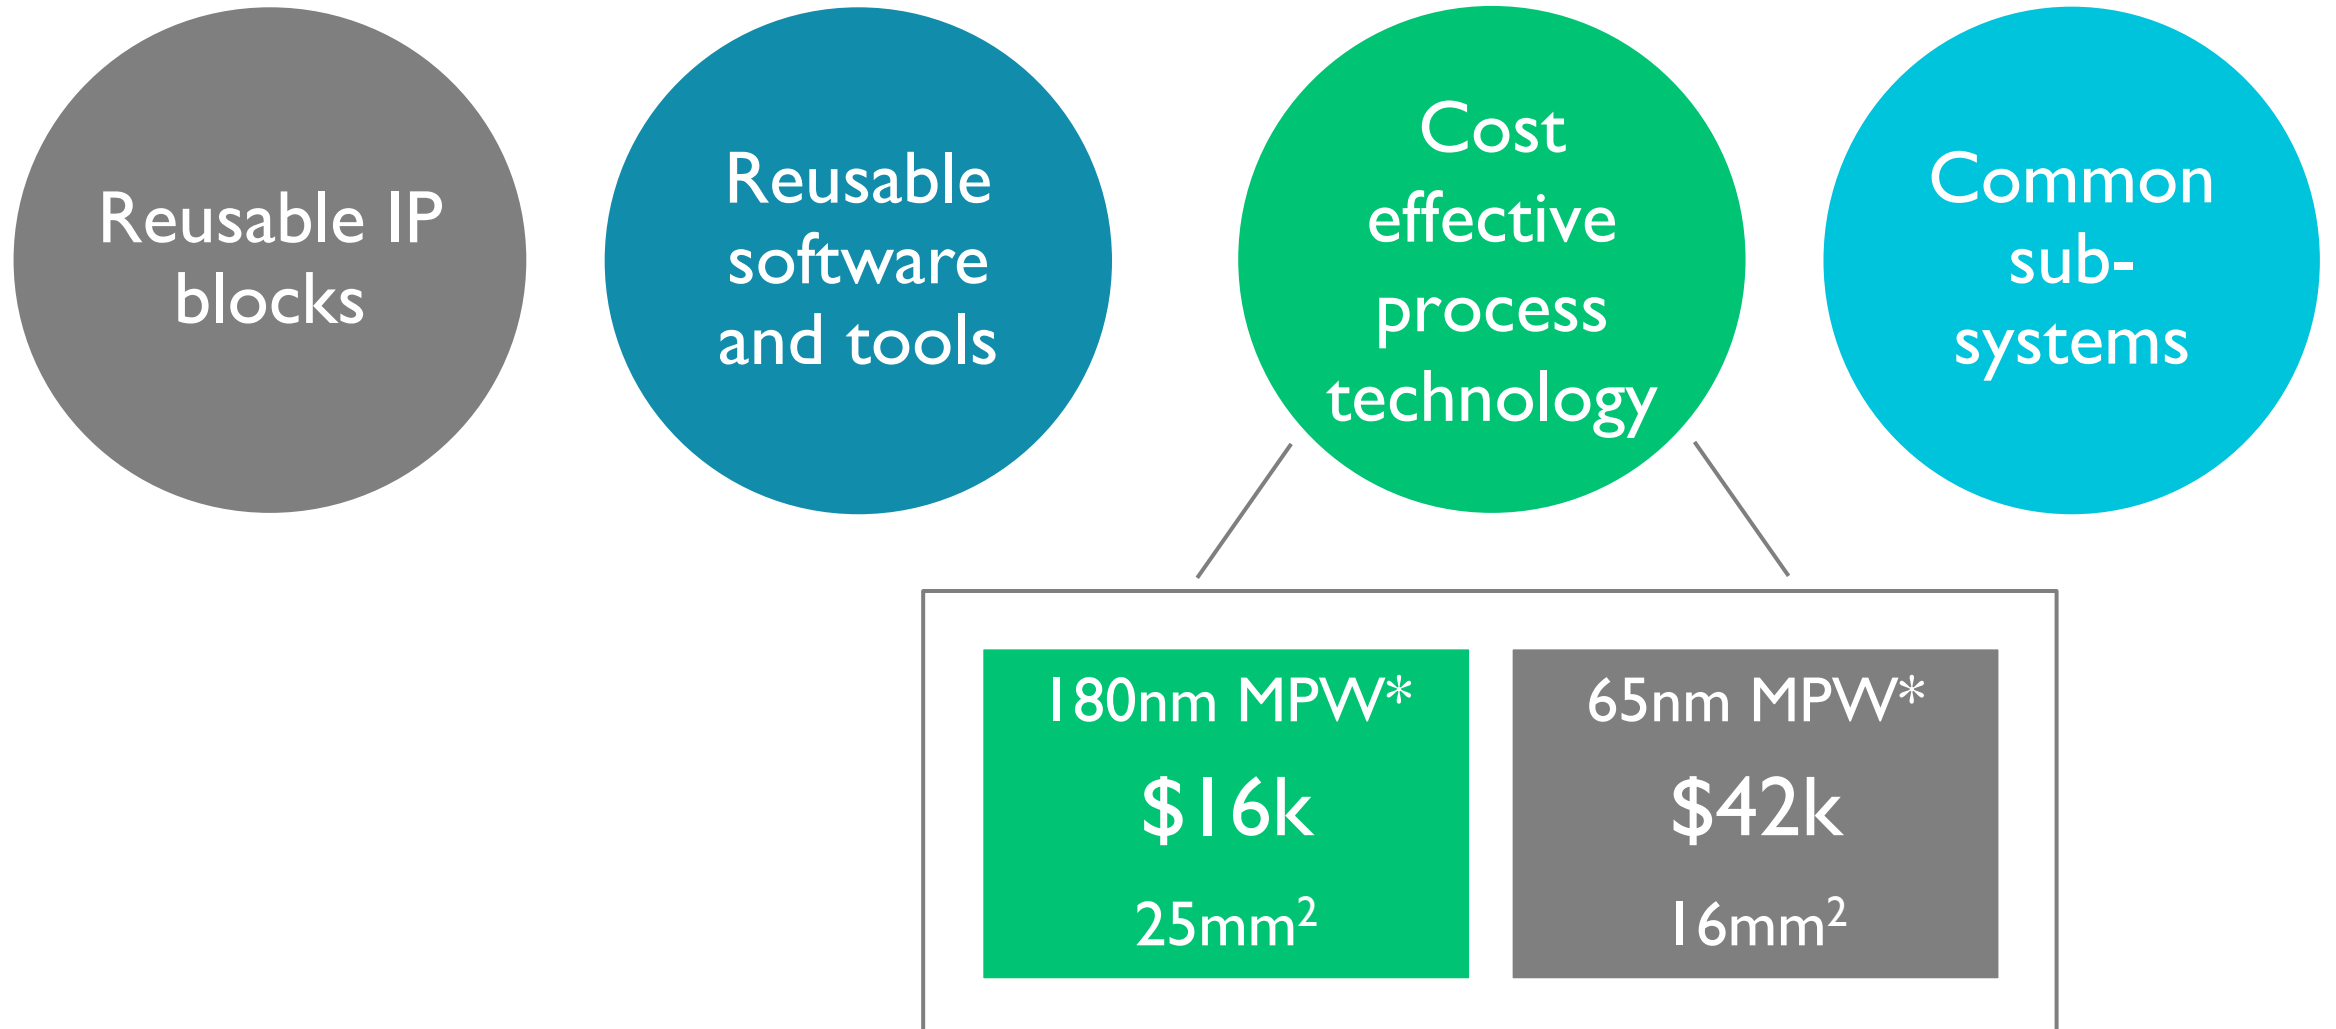

Start-ups: innovative solutions

OEMs: reduce cost, reduce power, differentiate

Embargoed until 7am GMT, Tuesday 13 October, 2015

Economics of Custom SoCs

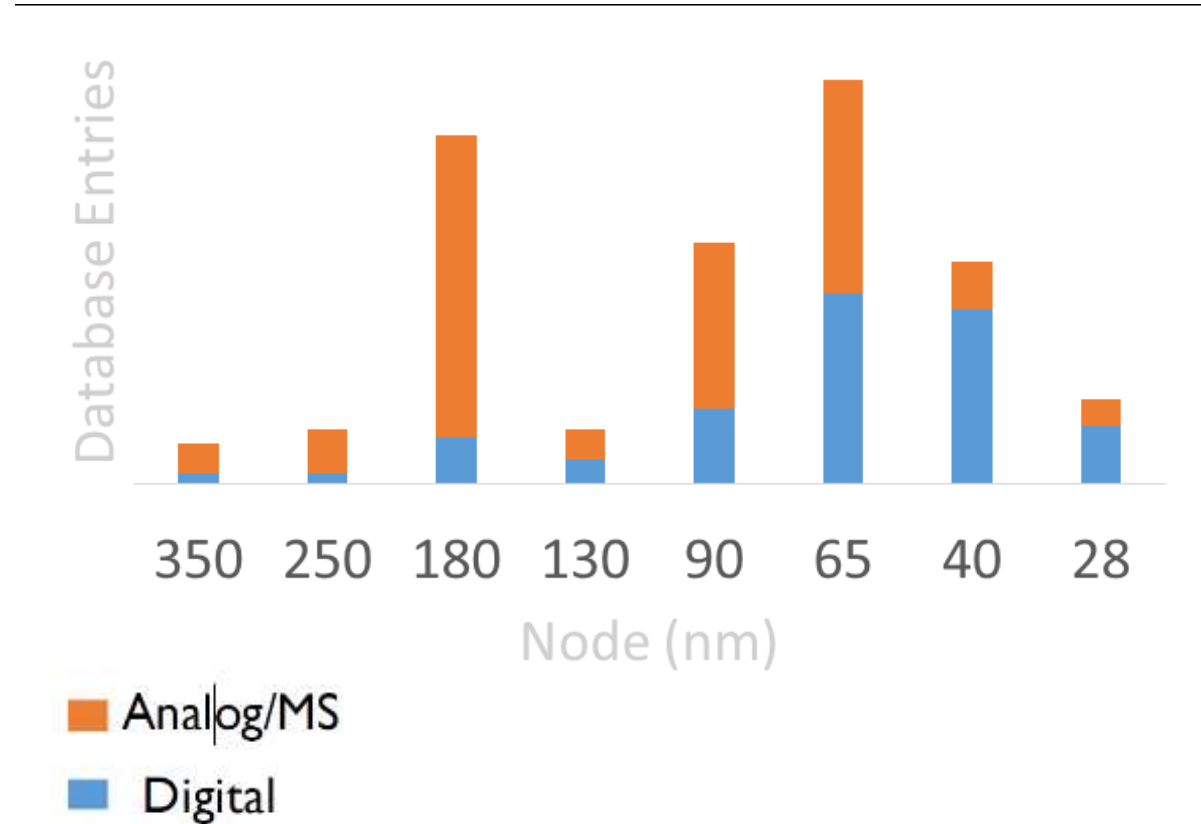

Embargoed until 7am GMT, Tuesday 13 October, 2015

Example: imec IC-link

Driven by “sub-stream innovation”

Sub-stream Innovation

“The convergence of high-growth, fragmented, wirelessly connected application domains and manufacturing sweet spots using mature technologies has led to an explosion of activity by SMEs.”

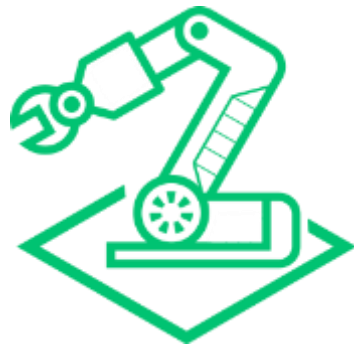

Real Example Mixed Signal Custom SoC from S3 Group

Smart Industrial
Sensor

Integration of discrete mixed signal
components and Cortex-M processor

Pressure & temperature sensing
Diagnostics
Motor control

PCB area

ARM DesignStart: Fast Route to Production Silicon

ARMDesignStart
IP Online Access

Design

Free of charge design & simulation using Cortex-M0 and system IP

Prototype

Low-cost prototyping on FPGA board (\$995)

Produce

\$40k fast track, simplified commercial license

Embargoed until 7am GMT, Tuesday 13 October, 2015

Easy Access to ARM IP

Design

Prototype

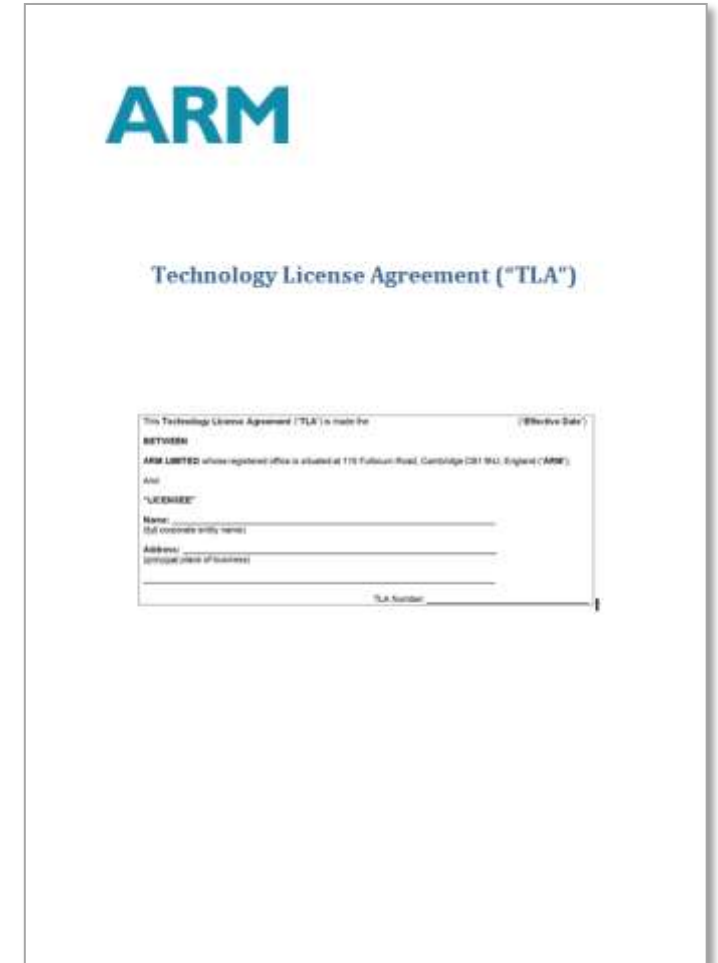

- ARM Cortex-M0 processor is now available for download from ARM's DesignStart portal (designstart.arm.com)
- Includes system IP and tools to simplify system design:
 - Cortex-M0 processor*
 - Cortex-M0 System Design Kit (key components of SDK including system IP, peripherals, test bench and software)
 - ARM Keil MDK development tool for software development – 3 month license
 - Prototyping option on ARM supplied FPGA board (\$995)

Easy and Low-cost Path to Commercialisation

Produce

- New fast track \$40k simplified licensing package
 - Makes it easy to move to next stage of product development
- Package includes system IP and tools to simplify system design:
 - Cortex-M0 processor
 - Cortex-M0 System Design Kit (including system IP, peripherals, test bench and software)
 - ARM Keil MDK development tool for software development
 - 1 year support and maintenance

Physical IP on DesignStart Portal

- Offering the broadest foundation physical IP foundry solutions
 - Over 15 foundries represented
 - Over 85 process node technologies supported
 - From 250nm to 16nm / 14nm FinFET
 - Download front end views to design
- Foundry sponsored physical IP = \$0 licensing fees
 - Many choices of foundries and process technologies

Embargoed until 7am GMT, Tuesday 13 October, 2015

Custom SoCs Open to All

- ARM's Design House partners bring chip development expertise
 - From turn-key chip development to consultancy and help
 - Assisting those customers with less SoC design experience
 - Providing additional resource to smaller teams

Embargoed until 7am GMT, Tuesday 13 October, 2015

ARM Cortex-M0 Processor Package

Cortex-M0

ARM's most widely licensed Cortex processor

Ideal for smart embedded and mixed signal applications

- Smallest 32-bit ARM processor – exceptionally low gate count
- Broad ecosystem
- Upwards compatibility with the Cortex-M series

Cortex-M0 SDK

System Design Kit for design acceleration

Reference design makes it easy to create Cortex-M0 based systems.

- Essential system IP to simplify integration
- AMBA interconnects and peripherals
- Firmware & test bench software

Keil MDK

Comprehensive software development solution for Cortex-M processors.

Optimised for deeply embedded processors

- IDE
- C/C++ compiler
- Debugger & trace
- Software package management
- Extensive Middleware

ARM

Accelerating Innovation

By streamlining access to ARM Cortex-M0

Thank You
